Software Quick Table

This table serves as quick reference for software compatibility with the Vista operating system. For more detailed information please visit the [Detailed Software Compatibility](#) page.

Yes: Software installs without errors and functions as intended or is only missing trivial features. Software we have listed as "Yes" should not require any work arounds, custom configuration, or be missing any critical functionality.

No: Software listed as "No" does not function as intended, or does not install correctly. This does not necessarily mean that the software cannot be made to function if altered and modified from its original form. We recommend that users who depend on software listed as not compatible do their own extensive testing to determine whether or not the limited functionality will meet their needs before committing to Vista.

Software	Version	Compatible?
ACD-Labs	8	No
Chemsketch		
ActiveSync	All	No
Ad-Aware	1.06	Yes
Adobe Acrobat Reader	8.0	Yes
