

Duke Office of Information Technology

Primetime with Tracy Futhey

September 7, 2007

Information technology has become inseparable from university life, virtual ivy interweaving with the real stuff on the hall of academe. In the last few years, Duke has been at the forefront of the information transformation occurring at leading American research institutions. From the conventional (e-mail and phone service) to the transformational (the Duke Digital Initiative and the latest version of DukePass), centralized groups such as the [Office of Information Technology](#) have helped shape the digital future for Duke. University departments throughout Duke also have played a crucial role in providing opportunities for experimentation with new technologies in the classroom, the lab and the workplace. Technology also plays a vital role in Duke's new strategic plan, "Making a Difference." Among the plan's priorities is investment in emerging technologies that improves collaborative learning and creates new opportunities to connect knowledge in the service of society.

Have a Question for Primetime?

Submit a question about information technology for Primetime with Tracy Futhey. If the question is selected, you could win a small prize for the best question. [Click here](#) to submit a question.

From noon to 1 p.m., Thursday, Sept. 13, join Duke's Chief Information Officer [Tracy Futhey](#) as she reflects on the many recent technology changes and lets the campus community in on new services and projects for the coming year.

Futhey will address technology issues such as planned upgrades to Duke's digital infrastructure. She also will discuss how these and other changes fit within Duke's IT vision and the implications of these changes for teaching, learning, research and operations at Duke.

The event, the fourth in the Primetime employee forum series, will be in the Griffith Film Theater in the Bryan Center.
